

PART 5: PROMPT ENGINEERING CHALLENGE

1 Summarising notes

Act as a professional summarizer. Create a concise and comprehensive summary of the notes below, while adhering to these guidelines:

GUIDELINES:

[

- Create a summary that is detailed, thorough, and complete, while maintaining clarity and conciseness
- Cover all key points and main ideas from the original notes
- Include relevant details and examples that support the main ideas
- Eliminate unnecessary information, repetition, and filler
- Rely strictly on the provided text—do NOT add external information
- Keep the length appropriate for the complexity of the original notes
- Organize with clear headings and bullet points for easy reading
- Preserve all important terminology, definitions, and key concepts

FORMAT:

- Use sections with clear headings
- Use bullet points for key ideas
- Keep each point to 1–2 lines

2 Generating a study plan

Act as a professional productivity coach and study expert. Create a complete, optimized daily study plan for me that maximizes learning efficiency and includes proper breaks.

MY CONTEXT:

[

- Current level: [student/working professional/exam aspirant]
- Target: [exam name/goal like "score 90%", "pass finals", "learn Python"]

- Subjects/Tasks to cover: [list subjects or tasks]
- Available study hours per day: [e.g., 6-8 hours]
- Peak focus time: [morning/afternoon/evening]
- Fixed commitments: [classes/work timings/other obligations]
- Learning style: [visual/auditory/practical]
- Special needs: [need more breaks/have ADHD/short attention span]

GUIDELINES FOR THE PLAN:

- Include 6–8 hours of total study time spread across multiple sessions
- Schedule hardest subjects during peak focus hours
- Use the Pomodoro technique (25 min study + 5 min break) or 50/10 rule
- Include short breaks (5–15 min) every 1–2 hours of study
- Include one longer break (30–60 min) for meals/rest
- Add time for morning routine, exercise, and meals
- Include a 30–60 min evening review session to reinforce learning
- End the day with planning for tomorrow (15–30 min)
- Ensure 7–8 hours of sleep for optimal memory retention
- Keep the schedule realistic and sustainable

1. A clear table with time slots, activities, and duration
2. Total study hours and total break hours
3. Optimization tips specific to my situation
4. A checklist for daily success

Make it practical, actionable, and tailored to my needs above.

3.creative interview questions

Act as a creative hiring manager and behavioral interviewing expert. Generate a list of 15–20 creative interview questions that go beyond traditional questions like "What's your greatest weakness?" or "Tell me about yourself."

ROLE/POSITION: [e.g., Software Developer, Marketing Manager, Product Designer, Sales Rep]

COMPANY CULTURE: startup

CREATIVITY GUIDELINES:

[

- Create questions that reveal problem-solving skills, creativity, and cultural fit
- Include scenario-based questions with real-world twists
- Add questions that test thinking under pressure (but not stressful)
- Include questions that reveal character, values, and work style
- Mix fun/light questions with deep/thoughtful ones
- Avoid questions that could be considered discriminatory or illegal
- Make questions engaging and conversation-starting
- Include at least 3 "wildcard" questions that are unexpected
- Include at least 2 questions that require the candidate to draw or sketch something

]

OUTPUT FORMAT:

Categorize the questions into:

1. Problem-Solving & Critical Thinking (4–5 questions)
2. Creative & Fun (3–4 questions)
3. Work Style & Culture Fit (4–5 questions)
4. Ambition & Growth Mindset (3–4 questions)
5. Role-Specific Scenarios (3–4 questions)

For each question, include:

- The question itself
- What it reveals about the candidate
- What a strong answer might look like

4. Writing a resume summary

Enthusiastic Computer Science student with a strong foundation in Artificial Intelligence, Machine Learning, and Generative AI. Experienced in developing innovative projects, exploring emerging technologies, and applying technical skills to solve real-world challenges. A quick learner with strong analytical and problem-solving abilities, seeking opportunities to contribute to impactful AI-driven solutions while continuously expanding technical expertise.

5. Creating a lesson plan

Act as an expert teacher and create a lesson plan on [Topic].

The lesson should:

- Use simple and easy-to-understand language.
- Explain concepts step-by-step.
- Include real-world examples.
- Highlight key points and definitions.
- Add a few practice questions.
- End with a quick summary for revision.

Make the lesson engaging, beginner-friendly, and easy to remember.

Audience: [Beginner/Student/Professional]

Duration: [30 min / 1 hour]
